

Supplementary figure S30 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'adult body size character'.

Supplementary figure S31 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'loricate larval stage'.

Supplementary figure S32 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'shape of lorica'.

Supplementary figure S33 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'caudal appendages'.

Supplementary figure S34 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'vesicles on caudal appendage'.

Supplementary figure S35 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'posterior warts'.

Supplementary figure S36 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'scald series'.

Supplementary figure S37 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'teeth appearance'.

Supplementary figure S38 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'neck region'.

Supplementary figure S39 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'flosculi'.

Supplementary figure S40 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'hooks on posterior trunk'.

Supplementary figure S41 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'ring papillae'.

Supplementary figure S42 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character ‘two structures lateral of anus’.

Supplementary figure S43 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character ‘sexual dimorphism’.

Supplementary figure S44 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'polythyridium'.

Supplementary figure S45 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree calculated by Mesquite for the character 'fertilization mode'.

Supplementary figure S46 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulus* and *Maccabeus* calculated by Mesquite for the character 'adult body size character'.

Supplementary figure S47 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulus* and *Maccabeus* calculated by Mesquite for the character 'loricate larval stage'.

Supplementary figure S48 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulius* and *Maccabeus* calculated by Mesquite for the character 'shape of larva'.

Supplementary figure S49 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulius* and *Maccabeus* calculated by Mesquite for the character 'caudal appendage'.

Supplementary figure S50 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character ‘vesicles on caudal appendage’.

Supplementary figure S51 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character ‘posterior warts’.

Supplementary figure S52 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character 'scald series'.

Supplementary figure S53 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character 'teeth appearance'.

Supplementary figure S54 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character ‘neck region’.

Supplementary figure S55 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character ‘flosculi’.

Supplementary figure S56 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulius* and *Maccabeus* calculated by Mesquite for the character ‘hooks on posterior trunk’.

Supplementary figure S57 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulius* and *Maccabeus* calculated by Mesquite for the character ‘ring papillae’.

Supplementary figure S58 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character ‘two structures lateral of anus’.

Supplementary figure S59 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulid* and *Maccabeus* calculated by Mesquite for the character ‘sexual dimorphism’.

Supplementary figure S60 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulius* and *Maccabeus* calculated by Mesquite for the character 'polythyridium'.

Supplementary figure S61 Likelihoods of the character states on the nodes of the combined 80% occupancy matrix tree with inferred positions of *Acanthopriapulius* and *Maccabeus* calculated by Mesquite for the character 'fertilization mode'.
